

COMP3225/6253 exam paper guidance

The exam will be a 2 hour in-person invigilated examination (i.e. traditional exam).

Rubric for 2022:

This paper contains 5 questions.

Answer only THREE questions in this paper.

Answer ALL questions from section A.

Answer only ONE question from section B.

Section A will have two questions. One will cover a classic NLP topic and one will cover a neural NLP topic.

Section B will have three questions covering a range of topics.

Only University approved calculators may be used.

Each question will follow a similar structure. Questions will assess your ability to recall and/or apply both the lecture content & directed reading from the course textbook. Questions will also assess your depth of understanding of module content, developed through wider reading of papers and articles mentioned in the lectures and course textbook.

COMP3225 past paper

The 2022 past exam paper is available on the module wiki page to give you an example of the type of questions that could be asked.

The COMP6253 exam paper will follow a very similar style, with the exception that part B questions will also ask you to demonstrate an ability to critically think about NLP methods in the context of the wider literature.

Revision lectures

There will be revision lectures in the last week of the module to help you prepare.
